PROFESSIONAL SUMMARY

Full Stack Software Engineer with nearly 4 years across the software development lifecycle, building backend services and React frontends in the logistics and NDIS domains. Object-oriented backend specialist in Java and Spring Boot, with production experience on AWS (EC2, S3, RDS), event-driven architecture using Apache Kafka, and secure authentication via JWT with role-based access control. Ships reliable, well-tested software end to end and automates delivery through Jenkins and GitHub Actions CI/CD. Master of Information Technology, Monash University.

EXPERIENCE

Software Engineer, Gencare Disability Services Pty Ltd, Melbourne, Australia

June 2024 - Present

- Built backend services in Java Springboot and a responsive frontend in React, delivering end-to-end features from API design through UI implementation.
- Leveraged Claude Code (AI-assisted development) to accelerate implementation, reduce boilerplate/manual coding time, and improve development velocity.
- Contributed to AWS infrastructure design, supporting deployment architecture and cloud resource planning for the application.
- Improved reliability with JUnit and Mockito test suites across participant-intake and service-request flows.

Software Engineer, Blume Global Pvt Ltd, Bangalore, India

August 2022 - January 2024

- Delivered 6+ RESTful SpringBoot API for shipment-lifecycle processing, cutting backend response times by 20%.
- Provisioned and operated AWS EC2 and S3 across development, staging, and production, standardising deployment environments.
- Implemented JWT-based authentication and RBAC for session persistence across supply chain platform reaching 90% unit-test coverage with JUnit and Mockito.
- Engineered event-driven, distributed workflows on Apache Kafka and automated delivery through Jenkins CI/CD with Docker and Kubernetes.

TECHNICAL SKILLS

Languages: C#, Java, JavaScript, SQL

Frontend and Backend: ReactJS, .NET, REST APIs, Microservices, GraphQL, Spring Boot, Vue.js, HTML, CSS, Node.js

Database and Cloud: MySQL, PostgreSQL, AWS, GCP.

Tools: Docker, Kubernetes, Jenkins CI/CD, GitHub Actions, Apache Kafka, JUnit, Mockito, Git, Postman.

Certifications: React, The Complete Guide (Udemy), Spring Boot 3 and Spring 6 with Hibernate (Udemy)

PROJECTS

BlueHaven | Household Water-Pollution Tracking Platform | github.com/BlueHaven

- Delivered an interactive water pollution awareness platform, turning raw environmental data into actionable visual insights for users.
- Reduced manual research time by 55% by building an AI-powered Ingredient Analyzer that instantly decodes household product contents.
- Built a geolocation-based Disposal Finder mapping nearby eco-friendly drop-off points, cutting the time to find safe disposal locations to under 10 seconds.
- Achieved 90% data accuracy in environmental insight visualizations by integrating and cleaning multi-source pollution datasets.

Bus Booking System | Online Bus-Ticket Booking and Seat-Reservation Platform

- Implemented Kafka-based queue processing for concurrent seat booking, ensuring only the first successful payment secured the seat while conflicting requests received a real-time error, preventing double-booking under high concurrency.

EDUCATION

Master of Information Technology

Monash University, Melbourne, Australia

February 2024 - December 2025
